

Lumpkin County Animal Shelter

What is Rabies?

- Rabies is a dangerous disease caused by a virus
- Around the world, rabies kills 50,000 people and millions of animals each year

Any mammal can get rabies

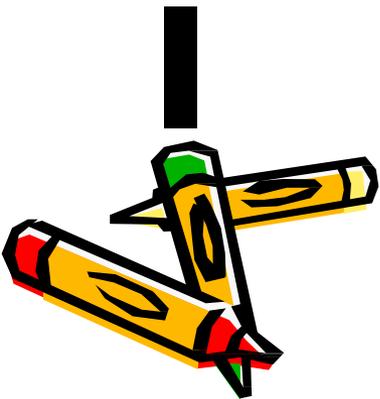

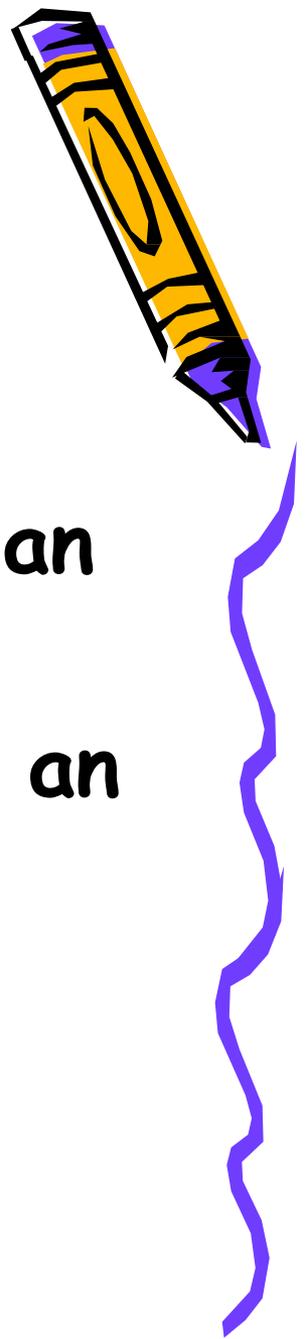

- Raccoons, skunks, foxes and bats
- Dogs, cats, cattle and ferrets
- Humans

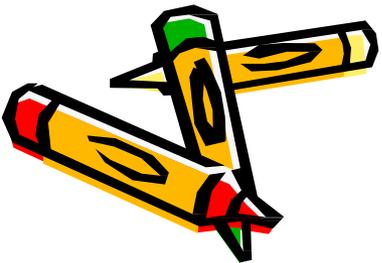

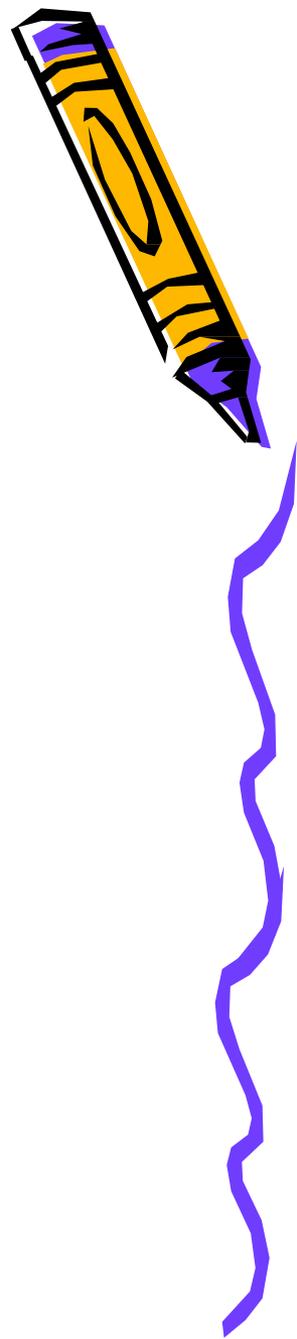

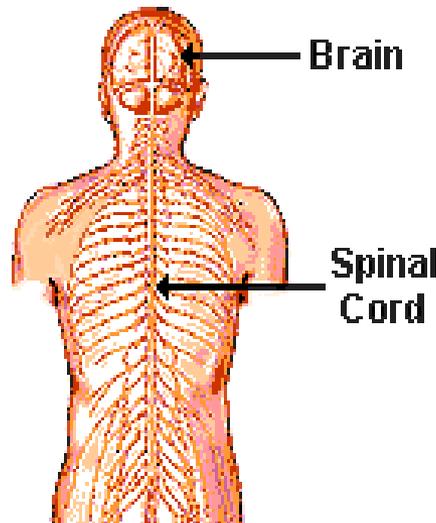

How do you get rabies?

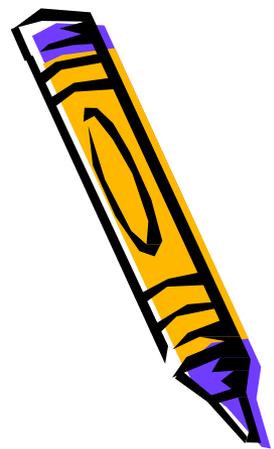

- People and animals get rabies if they are bitten or scratched by an animal that already has rabies
- Rabies is carried in the saliva of an animal with rabies

How does rabies make you sick?

- Once inside the body, the virus travels along the nerves to the spinal cord and brain

 If a person or animal gets Rabies, and is not treated, he or she will almost always die from it.

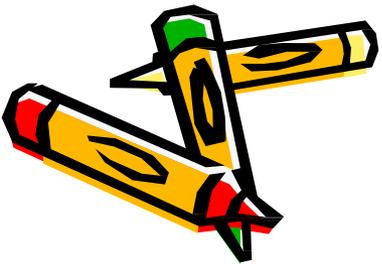

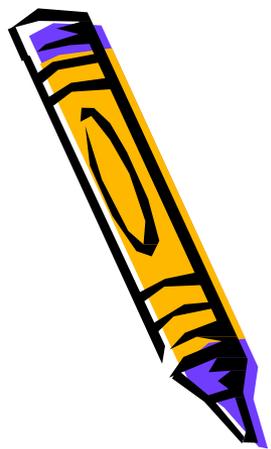

Animals that can give
you rabies

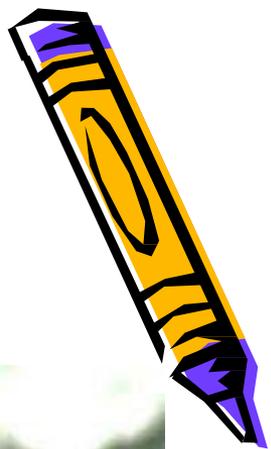

Raccoons

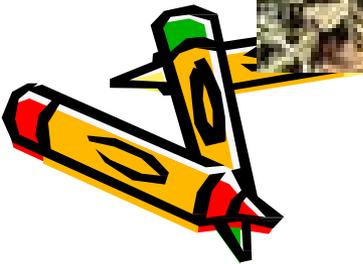

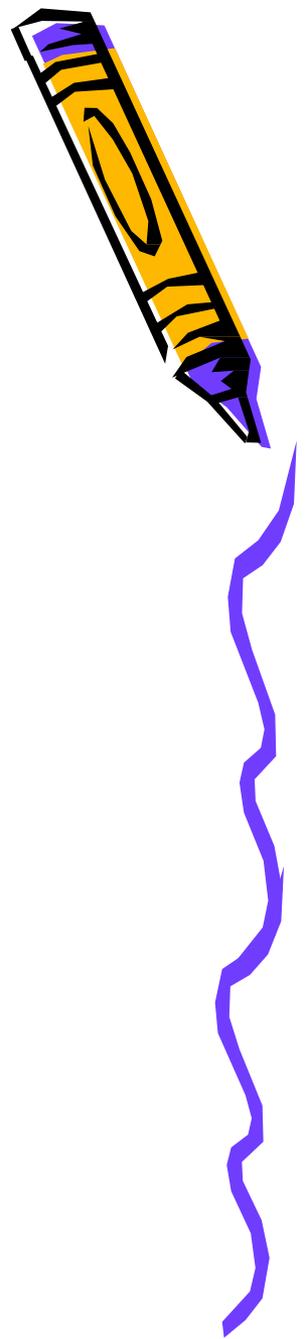

Bats

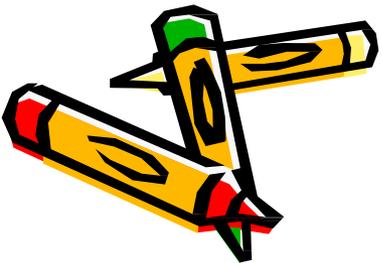

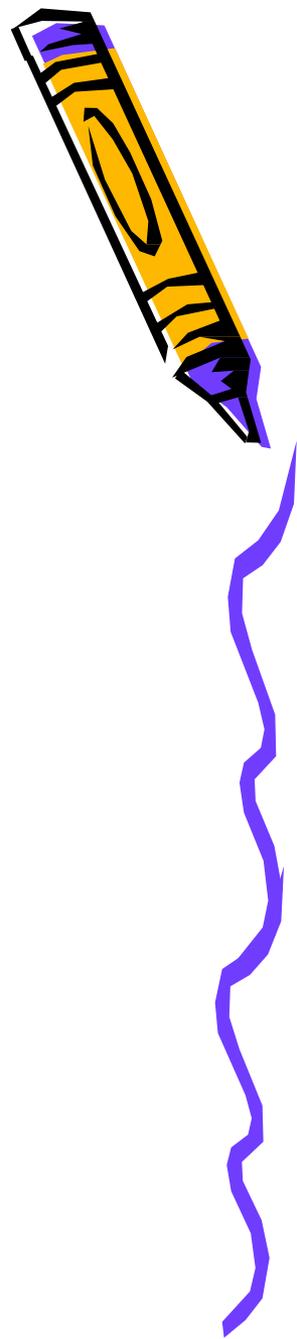

Foxes

Skunks

Ground Hogs

Cats-especially stray and unvaccinated

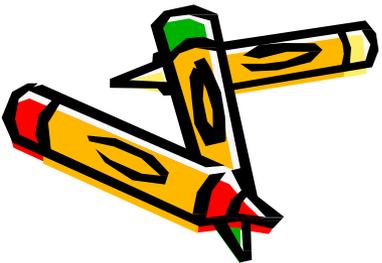

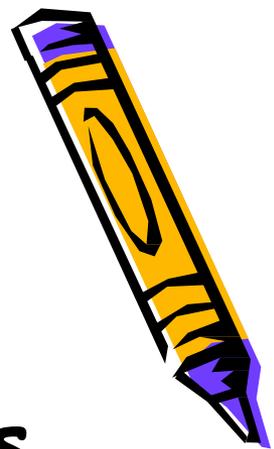

Dogs-especially stray and unvaccinated

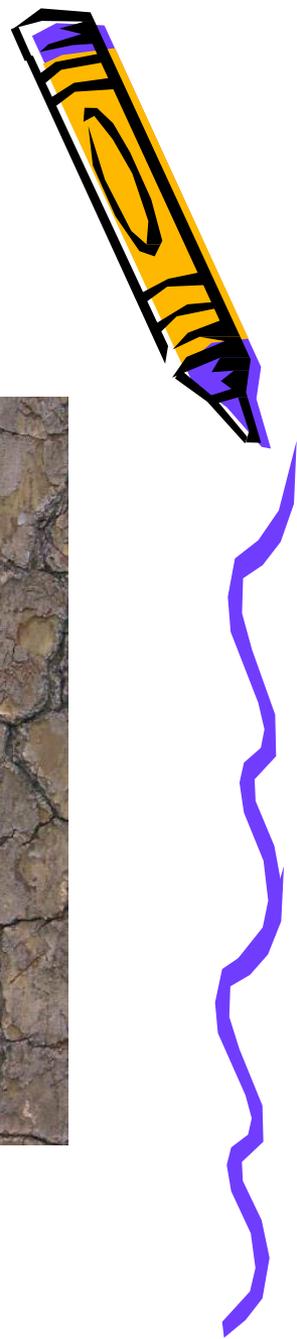

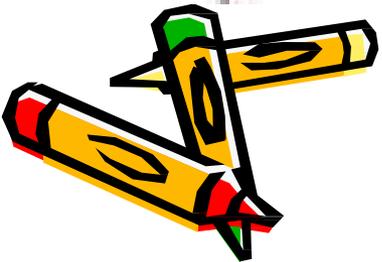

Ferrets

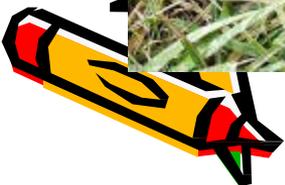

- Many people have ferrets as pets
- They should be vaccinated for rabies

Mammals that are LESS likely to give you rabies

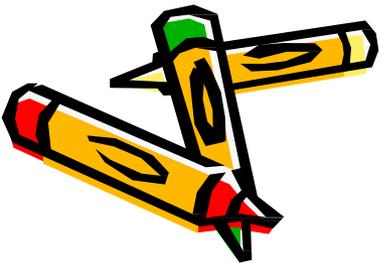

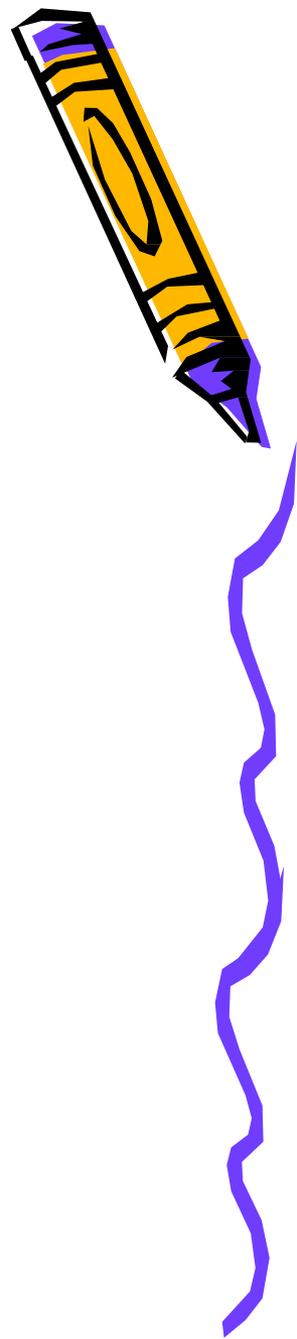

Animals that CANNOT give you rabies

How do you tell if an animal has rabies?

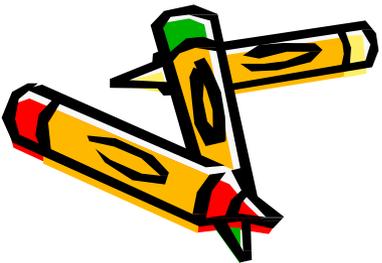

- Some animals may
 - act very mean
 - have problems walking
 - drool

How do you tell if an animal has rabies?

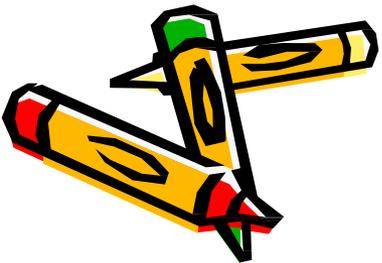

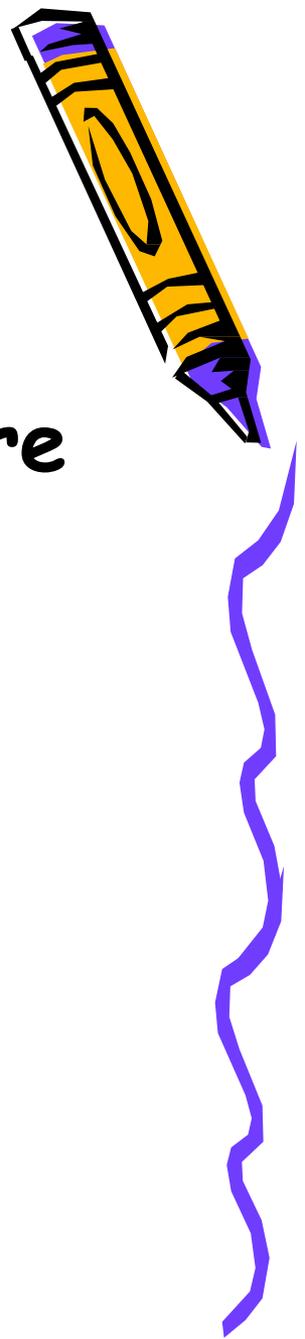

- ...it's important to remember that you can't tell if an animal has rabies just by the way it's acting
- Animals that appear healthy may have rabies
